

## Questions from Dr. Travis Teetor

1. Can a LPN perform all of the same tasks as a PCT? What about a medication aide's scope compared to a PCT? What about a Nurse Aide? Are the PCTs going to have to acquire their local anesthetic certification from the state?
2. Are there going to be any requirements for the PCTs to be BLS trained in case of an emergency?
3. Does a registry adequately address the concerns the Board of Nursing has or is licensure necessary?
4. A question for the Board of Nursing - Why is this all of a sudden an issue when there was no specific sentinel event and according to the applicant group's data, dialysis in Nebraska has had one of the lowest incidences of complications.
5. Do PCTS work in a home health setting at all, or solely in dialysis clinics?
6. If PCTS no longer existed in Nebraska, could dialysis centers continue to function, and what would that model look like?
7. What is the average cost to register and sit for the PCT exam?
